RE: Sustainability

For more than 115 years Lion Raisins has been fully dedicated to the highest standards in quality, safety, and sustainability. This unrelenting focus drives us to deliver products that exceed our customers' expectations and ensures we continually strive to remain the leading supplier of premium quality California raisins and raisin products in ways that promote the health and safety of the world in which we all live.

We source local ingredients keeping our transportation-related carbon footprint as minimal as possible while supporting California farmers for generations to come. Not only do we use the sun to dry our raisins, we also use it to power up to 60% of all our processing operations with our state-of-the-art six-acre solar farm.

Water is essential in our processing facility to clean the facility and the raisins. Because we know how essential water is to our process and to California's Central San Joaquin Valley that we call home, we do everything we can to conserve this precious natural resource. Much of the water we use in our facility is sent through a modern waste water treatment system, then it is used for irrigation in local agricultural applications.

We use a zero-waste approach when operating our facility from all the excess packaging materials being recycled, much of the water used during processing is treated and reused, and the raisin by-product is used in animal feed applications and other agricultural processes.

At Lion Raisins, our unwavering commitment is to never compromise the quality or safety of our products while continually researching and implementing the latest best practices in sustainability. This requires that every Lion Raisins associate be empowered to take the actions necessary to protect our customers and the environment we all share.

Regards,
